Organic matter preservation is central to understanding biological potential on Mars through time. Whether it holds a record of ancient life, is the food for extant life, or has existed in the absence of life, organic matter in martian materials holds chemical clues to planetary conditions and processes.

Exposure to air pollution is the fifth ranking human health risk factor globally, following malnutrition, dietary risks, high blood pressure, and tobacco . Secondary organic aerosols (SOA), a major component of fine particulate matter (PM 2.5) in cities around the world , form through oxidation of volatile organic compound (VOC) precursors.
